Use this chapter to set up and use your VX 520 terminal. Package contents and setup procedures may vary for different VX 520 models: The standard VX 520 uses thermal paper rolls while the VX 520 Sprocket uses carbonized paper sheets. Use the procedures in this section to set up and use your terminal.

- VX 520 Setup
- VX 520 Sprocket Setup
VX 520 Setup

This section describes the setup procedures for the VX 520 terminal. You will learn about:

- Selecting Terminal Location
- Unpacking the Shipping Carton
- Examining Terminal Features
- Establishing Telephone Line Connections
- Installing a Paper Roll in the Printer
- Installing/Replacing MSAM Cards
- Connecting Optional Devices
- Connecting the Terminal Power Pack
- Privacy Shield (Optional)
- Using the Smart Card Reader
- Using the Magnetic Card Reader

Selecting Terminal Location

Use the following guidelines when selecting a location for your VX 520 terminal.

Ease of Use

- Select a location convenient for both merchant and cardholder.
- Select a flat support surface, such as a countertop or table.
- Select a location near a power outlet and a telephone/modem line connection. For safety, do not string the power cord in a walkway or place it across a walkway on the floor.

Environmental Factors

- Do not use the terminal where there is high heat, dust, humidity, moisture, or caustic chemicals or oils.
- Keep the terminal away from direct sunlight and anything that radiates heat, such as a stove or motor.
- Do not use the terminal outdoors.

CAUTION

The terminal is not waterproof or dustproof, and is intended for indoor use only. Any damage to the unit from exposure to rain or dust may void any warranty.
Electrical Considerations

- Avoid using this product during electrical storms.
- Avoid locations near electrical appliances or other devices that cause excessive voltage fluctuations or emit electrical noise (for example, air conditioners, electric motors, neon signs, high-frequency or magnetic security devices, or computer equipment).
- Do not use the terminal near water or in moist conditions.

Unpacking the Shipping Carton

Open the shipping carton and carefully inspect its contents for possible tampering or shipping damage. The VX 520 terminal is a secure product and any tampering may cause the device to cease to function properly.

To unpack the shipping carton

1. Remove and inspect the following items:
   - Terminal
   - Power pack
   - Telephone line cord
   - Power cord
2. Remove all plastic wrapping from the terminal and other components.
3. Remove the clear protective film from the LCD screen.

CAUTION

Do not use a terminal that has been damaged or tampered with. The VX 520 terminal comes equipped with tamper-evident labels. If a label or component appears damaged, please notify the shipping company and your VeriFone representative or service provider immediately.

4. Save the shipping carton and packing material for future repacking or moving the terminal.
Examining Terminal Features

Before you continue the installation process, notice the features of the VX 520 terminal (see Figure 3).

Figure 3  VX 520 Terminal Features (Front Panel)

NOTE

VeriFone ships variants of the VX 520 terminals for different markets. Your terminal may have a different configuration from the features described in this section.

Front Panel

The front panel includes the following features:

- A terminal display, backlit LCD screen.
- Five types of keys:
  a  A backlit 12-key, telephone-style keypad.
  b  Four ATM-style function keys, labeled F1 to F4, to the right of the LCD screen.
c Four unlabeled, **programmable function keys** above the keypad.

d Three **color-coded function keys** below the keypad (icons at right; from left to right: CANCEL, BACKSPACE/CLEAR, ENTER).

e An **ALPHA key** centered at the top of the keypad.

- A **magnetic card reader**, built into the right side. The icon at right shows the proper swipe direction, with the stripe down and facing inward, toward the keypad.

- The VeriFone logo **blue indicator LED** indicates power is ON.

- An **internal thermal printer**.

- A **smart card reader**, built into the front of the terminal. The icon shown at right indicates proper card position and insertion direction.

- Three **SAM (security access module) compartments**, built into the side of the terminal. The VX 520 terminal contains MSAM cardholders to support multiple stored-value card programs or other merchant card requirements.

**NOTE**

VeriFone ships variants of the VX 520 terminal for different markets. Your terminal may have a different configuration. However, the basic processes described in this guide remain the same, regardless of terminal configuration.

### Connection Ports

Turn the terminal upside down and remove the rear cover to view the connection ports. Notice that the ports are recessed. Different ports provide connections to a communications line, optional peripheral devices, and the power supply.

**Figure 4** shows how to open the rear cover of the VX 520 terminal.
Figure 5 and Figure 6 show the connection ports for the VX 520 terminal.

**WARNING**

Do not connect the terminal to the power supply until all the peripherals are attached.
To use the connection ports

The connection ports offer multiple connectivity for the VX 520 terminal. Please refer to the following list of peripheral devices for the connectivity options.

Host USB Port

For information on how to attach peripheral devices, see Connecting Optional Devices.
Establishing Telephone Line Connections

Connect the telephone cord to the communication port on the terminal, then route it directly to a telephone wall jack (see Figure 7). This is a direct connection and the line is dedicated to the terminal.

Figure 7       VX 520 Direct Telephone Connection

WARNING

To reduce the risk of fire, use only No. 26AWG or larger UL Listed or CSA Certified Telecommunication Line Cord.

Installing a Paper Roll in the Printer

Before you can process transactions that require a receipt or record, you must install paper in the printer.

The VX 520 uses a roll of single-ply, thermal-sensitive paper for either the 38 mm- or the 49 mm-diameter version.

A pink out-of-paper indicator line appears on the edge of the paper approximately 18 inches before the end of the roll. After this line appears, there is enough paper remaining on the roll to conclude at least one transaction.

CAUTION

Poor-quality paper can jam the printer and create excessive paper dust. To order high-quality VeriFone paper, refer to Accessories and Documentation.

Store thermal paper in a dry, dark area. Handle thermal paper carefully: impact, friction, temperature, humidity, and oils affect the color and storage characteristics of the paper.

Never load a roll of paper with folds, wrinkles, tears, or holes at the edges.
To install a paper roll

1. Hook your finger under the latch and lift up to swing the paper roll cover open (see Figure 8).

Figure 8 Opening the Printer Cover

2. Remove any partial roll of paper in the printer tray by lifting it up.

3. Loosen the glued leading edge of the new paper roll or remove the protective strip. Unwind the paper roll past any glue residue.

4. Hold the roll so the paper feeds from the bottom of the roll.

5. Drop the paper roll into the printer tray.

Figure 9 Loading Paper Roll

6. Pull paper up past the glue residue.
7 Close the paper roll cover by gently pressing directly on the cover until it clicks shut, allowing a small amount of paper past the glue residue to extend outside the printer door. (see Figure 10).

**CAUTION**
To prevent the paper roll cover from damaging the print roller, always gently press down on the printer dust cover to close it.

---

Figure 10  Closing Paper Roll Cover

8 Tear the paper off against the serrated metal strip in the printer.

**NOTE**
For paper ordering information, refer to Accessories and Documentation.

**Installing/Replacing MSAM Cards**

When you first receive your VX 520 terminal, you may need to install one or more MSAM cards or you may need to replace old cards.

**CAUTION**
Observe standard precautions when handling electrostatically sensitive devices. Electrostatic discharges can damage this equipment. VeriFone recommends using a grounded anti-static wrist strap.
To install or replace MSAMs

1. Remove the power cord from the power outlet.

2. Place the terminal upside down on a soft, clean surface to protect the display from scratches.

3. Press the unlocking button and then lift the rear cover to access the MSAM cardholder panel.

![Figure 11 Opening VX 520 Rear Cover](image)

4. Hold the MSAM cardholder panel, grasp firmly and pull upward to expose the MSAM slots.

![Figure 12 Removing MSAM Cover](image)

4. Remove any previously installed MSAM card by sliding the card from the MSAM cardholder.
5 Install an MSAM card by carefully sliding it into the slot until it is fully inserted.

![Figure 13 Installing an MSAM Card](image)

**NOTE**
Before inserting the MSAM card, position it as shown in Figure 13, with the card’s gold contacts facing down. The cardholder connector base has an image resembling the notched corner of an MSAM card to ensure the card is positioned correctly.

6 Close the MSAM cardholder panel, and then replace the terminal rear cover.

**Connecting Optional Devices**
The VX 520 terminal supports some peripheral devices designed for use with electronic point-of-sale terminals.

**CAUTION**
Before connecting any peripheral device, remove the power cord from the terminal and ensure that the green indicator LED is not lit. Reconnect the power cord only after you are finished connecting the peripheral device(s). For complete information about peripheral installation and use, refer to the user documentation supplied with those devices.

Different terminals support different devices, so for more information about optional devices, please contact your VeriFone distributor.
Optional Device Connections

The VX 520 terminal has a port that can operate either as a PIN pad port or an RS-232 port, depending on the power source available.

Connecting the PIN pad or Smart Card Reader to the VX 520

Use the following procedures to connect a PIN pad or smart card reader.

1. Remove the VX 520 terminal rear cover.

2. Insert the RJ-45-type connector of the PIN pad or smart card reader into the port of the peripheral device.

   To install a PINpad 101, PINpad 201, or PINpad 1000, position and insert the grommet to secure the cable connection.

   If a cable is not already connected to the smart card reader or PIN pad, insert the small modular plug on one end of the interface cable into the optional device’s modular jack.

3. Insert the larger RJ-45-type connector on the other end of the PIN pad cable into the PIN pad serial port on the terminal. Figure 14 provides an example of a smart card reader and PIN pad connection to the PIN pad serial port.

![Figure 14 VX 520 Sample PIN Pad Connection](image-url)

**NOTE**

When the VX 520 terminal is powered via the corded power supply, the terminal provides 4.0 A at 9.3V DC. This power will drive most VeriFone accessories. Contact your local VeriFone representative for more information.
The VX 520 terminal also supports Electronic Cash Registers (ECR). Contact your VeriFone representative or visit the online store at www.store.verifone.com for information on these devices.

*Figure 15* provides an example of a peripheral connection to the USB port.

**CAUTION**

ECRs require a separate power source. Before connecting a check reader or similar device, remove the power cord and ensure that the indicator LED is not lit.
Connecting the Terminal Power Pack

When you have finished connecting optional peripheral(s), you are ready to connect the VX 520 terminal to the provided power source.

**CAUTION**

Using an incorrectly rated power supply may damage the terminal or cause it not to work as specified. Before troubleshooting, ensure that the power supply being used to power the terminal matches the requirements specified on the bottom of the terminal. (See Chapter 3, Specifications, for detailed power supply specifications.) Obtain the appropriately rated power supply before continuing with troubleshooting.

**NOTE**

Plugging in the power pack to a power source automatically turns on the terminal.

1. Remove the terminal rear cover to access the power port.
2. Insert the round barrel connector (see Figure 16) into the power port.

![Figure 16 VX 520 Power Pack Connection](image)

3. Rotate the power plug counter-clockwise and flush against the side panel to lock the plug in place.
4. Route the cable in the direction of the arrow above the power port and sling the cable over the underside of the thermal paper container.
5. Close the terminal rear cover.
6. Insert the AC power cord into the power pack.
7. Plug the AC power cord into a wall outlet or powered surge protector.

**WARNING**

Do not plug the power pack into an outdoor outlet or operate the terminal outdoors.

Disconnecting the power during a transaction may cause transaction data files not yet stored in terminal memory to be lost.

To protect against possible damage caused by lightning strikes and electrical surges, consider installing a power surge protector.
When the terminal has power, the terminal lights are activated and the LED indicator remains lit.

If an application is loaded in the terminal, it starts after the initial VeriFone copyright screen and usually displays a unique copyright screen. If no application is loaded in the terminal, **DOWNLOAD NEEDED** appears on screen after the initial VeriFone copyright screen.

**Privacy Shield (Optional)**

The privacy shield protects the customers’ PIN entry from being seen by the cashier or other customers. The illustration shows an example of a VX 520 with the optional privacy shield.

![VX 520 Optional Privacy Shield](image)

**Using the Smart Card Reader**

The smart card transaction procedure may vary from one application to another. Verify the procedure with your application provider before performing a smart card transaction.

**To conduct a smart card transaction**

1. Position a smart card with the contacts facing upward (see **Figure 18**).
2. Insert the smart card into the smart card reader slot in a smooth, continuous motion until it seats firmly.

**NOTE**

VeriFone recommends connecting wall power in the following order:

1. Connect the terminal to the power supply.
2. Connect the power supply to the power cord.
3. Connect the power cord to the wall outlet.

**NOTE**

Merchants who install the terminal without the privacy shield must ensure the cardholder’s privacy when entering his PIN by positioning the terminal away from open view.
Remove the card only when the application indicates the transaction is complete.

**Figure 18** Inserting a Smart Card

**CAUTION**
Leave the smart card in the card reader until the transaction is complete. Premature card removal will invalidate the transaction.

**Using the Magnetic Card Reader**

The VX 520 terminal supports credit or debit card transactions.

**To conduct a credit or debit card transaction**

1. Position a magnetic card with the stripe in the card reader and facing inward, toward the keypad.

2. To ensure a proper read of the magnetic swipe card, the user should insert the magnetic card from the top of the unit, as shown in Figure 19.

3. Swipe the card through the magnetic card reader.

**Figure 19** Using the Magnetic Card Reader

- Select a flat support surface, such as a countertop or table.
- Select a location near a power outlet and a telephone/modem line connection. For safety, do not string the power cord in a walkway or place it across a walkway on the floor.

**Environmental Factors**

- Do not use the terminal where there is high heat, dust, humidity, moisture, or caustic chemicals or oils.
- Keep the terminal away from direct sunlight and anything that radiates heat, such as a stove or motor.
- Do not use the terminal outdoors.

---

**CAUTION**

The terminal is not waterproof or dustproof, and is intended for indoor use only. Any damage to the unit from exposure to rain or dust may void any warranty.
Electrical Considerations

- Avoid using this product during electrical storms.
- Avoid locations near electrical appliances or other devices that cause excessive voltage fluctuations or emit electrical noise (for example, air conditioners, electric motors, neon signs, high-frequency or magnetic security devices, or computer equipment).
- Do not use the terminal near water or in moist conditions.

Unpacking the Shipping Carton

Open the shipping carton and carefully inspect its contents for possible tampering or shipping damage. The VX 520 Sprocket terminal is a secure product and any tampering may cause the device to cease to function properly.

To unpack the shipping carton

1. Remove and inspect the following items:
   - Terminal
   - Power pack
   - Telephone line cord
   - Power cord

2. Remove all plastic wrapping from the terminal and other components.

3. Remove the clear protective film from the LCD screen.

CAUTION

Do not use a terminal that has been damaged or tampered with. The VX 520 Sprocket terminal comes equipped with tamper-evident labels. If a label or component appears damaged, please notify the shipping company and your VeriFone representative or service provider immediately.

4. Save the shipping carton and packing material for future repacking or moving the terminal.
Examining Terminal Features  Before you continue the installation process, notice the features of the VX 520 Sprocket terminal (see Figure 20).

Figure 20  VX 520 Sprocket Terminal Features (Front Panel)

Front Panel
The front panel includes the following features:

• A terminal display, backlit LCD screen.

• Five types of keys:
  a  A 12-key, telephone-style keypad.
  b  Four ATM-style function keys, labeled F1 to F4, to the right of the LCD screen.
  c  Four unlabeled, programmable function keys above the keypad.
d  Three color-coded function keys below the keypad (icons at right; from left to right: CANCEL, BACKSPACE/CLEAR, ENTER). The Cancel key also acts as the Power Off button, while the Enter key also functions as the Power On button. Press the Enter key for at least three seconds to power on the terminal, and press the Cancel key for at least four seconds to power the terminal off.

e  An ALPHA key centered at the top of the keypad.

- A magnetic card reader, built into the right side. The icon at right shows the proper swipe direction, with the stripe down and facing inward, toward the keypad.

- An internal, sprocket-fed, serial dot-matrix printer.

- A smart card reader, built into the front of the terminal. The icon shown at right indicates proper card position and insertion direction.

- Three SAM (security access module) compartments, built into the side of the terminal. The VX 520 Sprocket terminal contains MSAM cardholders to support multiple stored-value card programs or other merchant card requirements.
Connection Ports

Turn the terminal upside down to view the connection ports. Notice that the ports are recessed. Different ports provide connections to a communications line, optional peripheral devices, and the power supply.

Figure 23 VX 520 Sprocket Telephone and Line Connections

WARNING
To reduce the risk of fire, use only No. 26AWG or larger UL Listed or CSA Certified Telecommunication Line Cord.

Installing Paper Tray

The VX 520 Sprocket terminal uses 76 mm carbonized paper sheets. This type of paper requires an external-mounted paper tray. Use the following procedure to install the paper tray for the VX 520 Sprocket terminal:

To install the paper tray
1 Align the slots with the paper tray clasps.
2 Slide the paper tray into the rear of the terminal.
3. Hook the clasps into the slots to secure the tray and snap the lock on the lower end of the tray.

Figure 24 Attaching Paper Tray
Installing Paper in the Tray

Before you can process transactions that require a receipt or record, you must install paper in the printer tray.

The VX 520 Sprocket uses a stack of double-ply carbonized paper.

To install a paper stack

1. Remove any partial stack of paper in the printer tray.
2. Place the new stack of paper into the tray.
3. Feed the first sheet of paper into the sprocket printer and then turn the sprocket to feed the paper to the printer.

Installing/Replacing MSAM Cards

When you first receive your VX 520 Sprocket terminal, you may need to install one or more MSAM cards or you may need to replace old cards.

**CAUTION**

Observe standard precautions when handling electrostatically sensitive devices. Electrostatic discharges can damage this equipment. VeriFone recommends using a grounded anti-static wrist strap.

To install or replace MSAMs

1. Remove the power cord from the power outlet.
2. Place the terminal upside down on a soft, clean surface to protect the display from scratches.
4. Unscrew the MSAM cardholder cover and pull the cover away to expose the MSAM slots.
5 Remove any previously installed MSAM card by sliding the card from the MSAM cardholder.

6 Install an MSAM card by carefully sliding it into the slot until it is fully inserted.

**NOTE**  
Before inserting the MSAM card, position it as shown in Figure 26, with the card’s gold contacts facing down. The cardholder connector base has an image resembling the notched corner of an MSAM card to ensure the card is positioned correctly.

7 Return and secure the MSAM cardholder cover with the screw.

**Connecting Optional Devices**  
The VX 520 Sprocket terminal supports some peripheral devices designed for use with electronic point-of-sale terminals.

**CAUTION**  
Before connecting any peripheral device, remove the power cord from the terminal. Reconnect the power cord only *after* you are finished connecting the peripheral device(s). For complete information about peripheral installation and use, refer to the user documentation supplied with those devices.

**NOTE**  
When the VX 520 Sprocket terminal is powered via the corded power supply, the terminal provides 1.7 A at 24V DC. This power will drive most VeriFone accessories. Contact your local VeriFone representative for more information.

Different terminals support different devices, so for more information about optional devices, please contact your VeriFone distributor.

**Optional Device Connections**  
The VX 520 Sprocket terminal has a port that can operate either as a PIN pad port or an RS-232 port, depending on the power source available.
**Connecting the PIN pad or Smart Card Reader to the VX 520 Sprocket**

Use the following procedures to connect a PIN pad to the VX 520 Sprocket.

**Figure 27** provides an example of a peripheral connection to the Host USB port.

1. Turn the terminal upside down to access the connection ports.
2. Insert the USB connector of the PIN pad into the USB port of the VX 520 Sprocket.

**Connecting ECRs to the VX 520 Sprocket**

The VX 520 Sprocket terminal also supports Electronic Cash Registers (ECR). Contact your VeriFone representative or visit the online store at [www.store.verifone.com](http://www.store.verifone.com) for information on these devices.

**Figure 28** provides an example of a peripheral connection to the Client USB port.

---

**CAUTION**

ECRs require a separate power source. Before connecting a check reader or similar device, remove the power cord and ensure that the indicator LED is not lit.
Connecting the Terminal Power Pack

When you have finished connecting optional peripheral(s), you are ready to connect the VX 520 Sprocket terminal to the provided power source.

**CAUTION**

Using an incorrectly rated power supply may damage the terminal or cause it not to work as specified. Before troubleshooting, ensure that the power supply being used to power the terminal matches the requirements specified on the bottom of the terminal. (See Chapter 3, Specifications, for detailed power supply specifications.) Obtain the appropriately rated power supply before continuing with troubleshooting.

**To connect the terminal power pack**

1. Turn the terminal upside down to access the power port.
2. Insert the round barrel connector (see Figure 29) into the power port.

![Figure 29 VX 520 Sprocket Power Pack Connection](image)

3. Rotate the power plug counter-clockwise and flush against the side panel to lock the plug in place.
4. Route the cable in one of the channels on the underside of the terminal.
5. Insert the AC power cord into the power pack.
6  Plug the AC power cord into a wall outlet or powered surge protector.

7  Press the Enter key for at least three seconds to power on the terminal.

**WARNING**

Do not plug the power pack into an outdoor outlet or operate the terminal outdoors.

Disconnecting the power during a transaction may cause transaction data files not yet stored in terminal memory to be lost.

To protect against possible damage caused by lightning strikes and electrical surges, consider installing a power surge protector.

---

**NOTE**

VeriFone recommends connecting wall power in the following order:

1  Connect the terminal to the power supply.

2  Connect the power supply to the power cord.

3  Connect the power cord to the wall outlet.

If an application is loaded in the terminal, it starts after the initial VeriFone copyright screen and usually displays a unique copyright screen. If no application is loaded in the terminal, **DOWNLOAD NEEDED** appears on screen after the initial VeriFone copyright screen.

**Privacy Shield (Optional)**

The privacy shield protects the customers’ PIN entry from being seen by the cashier or other customers.

**NOTE**

Merchants who install the terminal without the privacy shield must ensure the cardholder’s privacy when entering his PIN by positioning the terminal away from open view.
Using the Smart Card Reader

The smart card transaction procedure may vary from one application to another. Verify the procedure with your application provider before performing a smart card transaction.

To conduct a smart card transaction

1. Position a smart card with the contacts facing upward (see Figure 30).
2. Insert the smart card into the smart card reader slot in a smooth, continuous motion until it seats firmly.
3. Remove the card only when the application indicates the transaction is complete.

Figure 30 Inserting a Smart Card

CAUTION

Leave the smart card in the card reader until the transaction is complete. Premature card removal will invalidate the transaction.
Using the Magnetic Card Reader

To conduct a credit or debit card transaction

1. Position a magnetic card with the stripe in the card reader and facing inward, toward the keypad.
2. To ensure a proper read of the magnetic swipe card, the user should insert the magnetic card from the top of the unit, as shown in Figure 31.
3. Swipe the card through the magnetic card reader.

Figure 31 Using the Magnetic Card Reader

The VX 520 Sprocket terminal supports credit or debit card transactions.

Maintenance

The VX 520 terminal has no user-maintainable parts.

Clean the Terminal

To clean the terminal, use a clean cloth slightly dampened with water and a drop or two of mild soap. For stubborn stains, use alcohol or an alcohol-based cleaner.

**CAUTION**

Never use thinner, trichloroethylene, or ketone-based solvents – they may cause deterioration of plastic or rubber parts.

Do not spray cleaners or other solutions directly onto the keypad or terminal display.

Terminal Contacts

Gently swab the contacts with alcohol or contact cleaner to remove the dirt. It is important that the exposed contacts of the VX 520 terminal stay clean and unbent.

**CAUTION**

Avoid touching the contacts of the terminal. Finger oils tarnish contacts, causing bad connections. When experiencing a high occurrence of bad or incomplete data transfers, clean the contacts.

Smart Card Reader

Do not attempt to clean the smart card reader. Doing so may void any warranty. For smart card reader service, contact your VeriFone distributor or service provider.
VeriFone Service and Support

For terminal problems, contact your local VeriFone representative or service provider.

Troubleshooting Guidelines

The troubleshooting guidelines provided in the following section are included to assist you to successfully install and configure your VX 520 terminal. If you have problems operating your VX 520 terminal, please read through these troubleshooting examples.

If the problem persists even after performing the outlined guidelines or if the problem is not described below, contact your local VeriFone representative for assistance. Typical examples of malfunction you may encounter while operating your VX 520 terminal and steps you can take to resolve them are listed.

NOTE

The VX 520 terminal contains no user serviceable parts. Do not, under any circumstance, attempt to disassemble the terminal. Perform only those adjustments or repairs specified in this guide. For all other services, contact your local VeriFone service provider. Service conducted by parties other than authorized VeriFone representatives may void any warranty.

CAUTION

Using an incorrectly rated power supply may damage the terminal or cause it not to work as specified. Use only a VeriFone-supplied power pack with the correct output ratings. Before troubleshooting, ensure that the power supply being used to power the terminal matches the requirements specified on the bottom of the terminal. (See Specifications for detailed power supply specifications.) Obtain the appropriately rated power supply before continuing with troubleshooting.

Blank Display

When the terminal display screen does not show correct or clearly readable information:

- Check terminal power connection.
- Remove and reapply power to the terminal.
- Check all cable connections and verify that the telephone line is properly connected.
- If the problem persists, contact your local VeriFone service provider.
Terminal Does Not Dial Out

If the terminal does not dial out:

- Check the telephone line connections.
- Check that the telephone line is working by plugging it into a working telephone and listening for a dial tone.
- Replace the telephone cable that connects the terminal with a cable you know is working correctly.
- If the problem persists, contact your local VeriFone service provider.

Printer Paper Jam

If paper jams inside the printer:

- Open the paper roll cover.
- Remove the damaged paper from the paper roll and clear the feed mechanism.
- Install printer paper.
- If the problem persists, it may be due to poor paper quality. Install a new roll of higher-quality paper.

WARNING

Poor-quality paper may jam the printer. To order high-quality VeriFone paper, refer to Accessories and Documentation.

Keypad Does Not Respond

If the keypad does not respond properly:

- Check the terminal display. If it displays the wrong character or nothing at all when you press a key, follow the steps outlined in Transactions Fail To Process.
- If pressing a function key does not perform the expected action, refer to the user documentation for that application to ensure you are entering data correctly.
- If the problem persists, contact your local VeriFone representative.

Peripheral Device Does Not Work

If any peripheral device (PIN pad or smart card reader) does not work properly:

- Check the power cord connection to the peripheral device.
- Check that the device connected to the proper port has power and is functioning properly. If possible, perform a self-test on the device in question.
- The cable connecting the optional device to the terminal serial port may be defective. Try a different serial cable. See Connecting Optional Devices.
- If the problem persists, contact your local VeriFone representative.
Transactions Fail To Process

There are several reasons why the terminal may not be processing transactions. Use the following steps to troubleshoot failures.

Check the Magnetic Card Reader

- Perform a test transaction using one or more different magnetic stripe cards to ensure the problem is not a defective card.
- Ensure that you are swiping cards properly. With the card reader, the black magnetic stripe on the card should face down and inward, toward the keypad and must be inserted from the top of the terminal.
- Process a transaction manually, using the keypad instead of the card reader. If the manual transaction works, the problem may be a defective card reader.
- If the manual transaction does not work, proceed to Check the Telephone Line.
- Contact your VeriFone distributor or service provider.

Check the Smart Card Reader

- Perform a test transaction using several different smart cards to ensure the problem is not a defective card.
- Ensure that the card is inserted correctly and that the card is not removed prematurely.
- Ensure the MSAM cards are properly inserted in the cardholders and that the cardholders are properly secured (see Installing/Replacing MSAM Cards).
- If the manual transaction does not process, proceed to Check the Telephone Line.
- Contact your VeriFone distributor or service provider.

Check the Telephone Line

- Disconnect the telephone line from the terminal and connect it to a working telephone to check for a dial tone. If there is no dial tone, replace the telephone cable.
- If the problem appears to be with the telephone line, check with the party you are trying to call to see if their system is operational. If they are not experiencing difficulties with their line, contact the telephone company and have your line checked.
- If the telephone line works, contact your local VeriFone representative for assistance.
If the printer does not work properly:

- Check terminal power connection.
- Check if the printer is out of paper and that the roll is properly installed. Open the paper roll cover and install a new roll of printer paper or ensure that the roll is feeding from the bottom.
- Verify that the printer roller and paper roll dust cover are properly installed.
- If the problem persists, contact your VeriFone distributor or service provider.

Connect the terminal in to a known-good power supply (if you have one) to see if this clears the problem.
- If the problem persists, contact your local VeriFone representative for assistance.

Make sure you press the ENTER key for approximately 3 seconds, until the unit lights up.
